## **PREFACE**

Marine Geological Institute of Indonesia (MGI'S) responsibilities are to provide marine geoscientific map, research and information to support sustainable development of Indonesian's mineral and petroleum industries, mapping of Indonesian Coastal and Ocean Territory, identification of marine and coastal geological hazards, and to provide marine and coastal geological and geophysical data base for marine and coastal landscape.

In this second edition of year 2014, the number of important information are highlighted involving: The Correlation Between Benthic Foraminifera and Sediment Types of South Makassar Strait; Characteristic of Shallow Subsurface Lithology Based on Ground Probing Radar Data Interpretation at Temaju Coast, Sambas District, West Kalimantan Province; Suppressing Diffraction Effect Using Kirchhoff Pre-stack Time Migration on 2D Seismic Multichannel Data at Flores Sea; Impacts of Marine Sand Mining Activities to the Community of Lontar Village, Serang - Banten; Indication of Hydrothermal Alteration Activities Based on Petrography of Volcanic Rocks in Abang Komba Submarine Volcano, East Flores Sea.

From the desk of editors, thank to the authors who contribute their valuable papers for the readers.
